

SAVE UP TO 45% **monthly** on your PSE&G electricity rate through New Jersey's community solar program.

✓ No rooftop panels

✓ No fees

✓ Guaranteed savings

How it Works

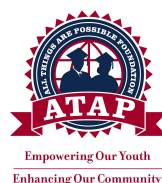

- Eversolar builds community solar farms on warehouse rooftops across New Jersey
- We send the solar power produced from these projects into the grid and receive solar credits
- We allocate the solar credits to the utility bills of local households who subscribe to our community solar projects – **no need to install solar panels on their own rooftops**
- **Up to 45%** of the solar credit value is applied as a discount directly on subscribers' next utility bill
- Local households pay this discounted utility bill through their same utility provider – **no signup or cancellation fees**

Why You Can Trust it

- **Proven model:** New Jersey piloted its community solar program for 4 years before the Board of Public Utilities established a permanent Community Solar Energy Program (CSEP) in August 2023
- **State-sponsored program:** The Board of Public Utilities designed the NJ CSEP to make clean energy and solar available to everyone
- **Accessible to all:** Both renters and homeowners are eligible

Frequently Asked Questions

Q: Isn't this too good to be true?

A: We are so happy to share that it isn't! This program is a NJ state program. The guaranteed discounts are mandated by the program, and developers like Eversolar are required to adhere to strict consumer protections.

Q: What are the program's consumer protections?

A: No fee to start or stop your subscription, no credit checks, and guaranteed savings per your contract (backed by law).

Q: How are there no upfront fees for community solar?

A: Community solar eliminates upfront fees by allowing you to subscribe to a community solar project, saving you the cost of individual installation. Community solar developers build the projects so you can access clean energy without any upfront expenses.

Q: How does Eversolar make money?

A: We sell RECs (renewable energy credits) to the utilities and discounted solar credits to you.

Q: Is the customer subscription connected to the home or to the person?

A: Unlike rooftop solar, community solar is connected to your utility account only. It is not connected to a building or apartment. If you move within the same utility territory in NJ, you can take your community solar subscription with you. If you move out of a utility territory, you can cancel your community solar subscription at any time for no fee.

Q: Why does Eversolar offer discounted solar credits?

A: The NJ community solar program incentivizes developers to pass along the highest discounts possible to subscribers. Eversolar commits to offering subscribers a discount of at least 20%. Where possible, we commit to an even higher discount.

Q: What do customers need on hand to sign up?

A: Customers need to provide their name and address, confirm whether they qualify as LMI, and enter their utility account number and/or online utility account username and password. That's it!

Q: What are the downsides of community solar?

A: This is a program carefully designed to provide no-risk energy savings to NJ residents of all incomes. However, if you own your home and are able to invest in installing panels, owning your own rooftop solar may generate more savings for you in the long run. As with any household decision, we recommend you consider your own situation carefully before choosing a clean energy solution.

Q: Will customers get two bills?

A: Nope! Thanks to changes made by the Board of Public Utilities, customers will have their solar credits applied directly to their normal utility bill. The only difference will be a lower bill than before thanks to your community solar subscription!

Q: How do I save money with community solar?

A: When you subscribe to a community solar farm, you receive solar credits for your share of the clean energy the farm produces. Just like homeowners who have their own panels, you receive these solar credits as savings on your utility bill. Eversolar guarantees your utility bill savings will be at least 20% of the value of the solar credits produced by your share of the solar farm. For example, if your share produces \$100 worth of solar credits one month, you'll save \$20 on your utility bill! Your actual discount will be dependent on farm placement, but will never be less than 20%.

Q: How is my discount determined?

A: Eversolar maximizes your discount based on your utility and farm availability. Those that sign up first save the most!

Q: How is this different from rooftop solar?

A: Rooftop solar has helped many in NJ, but over a million households are unable to participate, including all those who rent their homes or apartments. New Jersey's community solar program aims to make renewable energy accessible to everyone, offering risk-free participation with no ownership or maintenance of panels, no enrollment fees, and free cancellation, ensuring every New Jersey resident can support and benefit from clean energy.
